

# Origami CD/DVD Packet

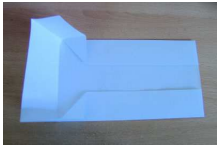

Step 1: Design the cover in Microsoft Publisher using the supplied template and then print it out. Lay the printed sheet face down on a hard surface and fold the two long edges in along the faint gray lines.

Step 2: Turn the folded sheet over and fold the bottom short edge in along the two faint gray lines.

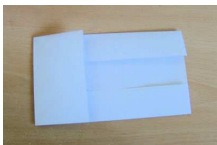

Step 3: Unfold the short end, turn the sheet over and fold the short end over -- reversing the previous fold.

Step 4: Now for the tricky bit. Unfold the short end half way so it's standing at 90 degrees to the rest of the sheet. Take the folded long side and pull out until 90 degrees and then crease to make a corner. Repeat with the other side to arrive at the picture.

Step 5: Push the short side down flat onto the rest of the sheet, creating two winged pieces.

Step 6: Tuck the wings in to create an envelope like section.

Step 7: Turn over the corners to create the top flap and place your CD/DVD into the packet.

Step 8: Fold the flap down over the CD and crease. Then tuck the point of the flap into the packet to stop the CD falling out.

That's it you now have a nice CD/DVD packet!
